

Covers for Covers

It is important to correctly care for and store your pool cover in a protective storage cover of its own when not in use. This reduces weathering and sun damage and significantly extends a cover's lifespan.

Standard Solar Protection Sheet for thermal covers

Our thermal covers all come with a free white solar protection sheet. Please use this as it really will prevent premature ageing of your cover. Unfortunately we can't be held accountable if sun damage occurs and the protection sheet has not been used as recommended. Always drape it over the rolled up cover and secure well with the rope provided (see right).

We also have a range of specialised covers for more superior protection and better cover longevity, detailed below. By storing your cover in a tailor-made cover, you also create a neater poolside setting. Depending on your cover type and whether you have a Rollup Station, chose from the options below.

^ Standard solar protection sheet

Covers for Covers: Thermals

Even if the cover is rolled up or on a Rollup Station when not in use, the cover is still exposed to natural elements that shorten the lifespan. This cover can be used to store thermal covers with or without Rollup Stations.

The cover used for the PowerPlastics Solid Safety Cover (featured below) is also an excellent cover for our thermals range.

Features and materials

- Made from 550gsm PVC
- Heavy duty Velcro fastening along the length
- Draw strings at both ends to seal the cover
- Colours: blue, grey, green, beige, brown

Covers for Covers: Rollup Stations

Protect your Rollup Station and thermal cover at the same time. The entire Rollup Station sits in the casing and the sides are pulled up. The single opening on the top is sealed with Velcro.

Features and materials

- Made from 550gsm PVC
- Heavy duty Velcro fastening along the top
- Colours: blue, grey, green, beige, brown

Covers for Covers: the PowerPlastics Solid Safety Cover

Designed specifically for our solid cover with aluminium battens, the castors make this cover easily movable by one person. Simply pick it up at one end using the handle and wheel away when not in use. It's much like wheeling your suitcase - so easy, even kids can help pack up and wheel it away!

This is also a great way to store thermal covers without Rollup Stations.

Features and materials

- Made from 550gsm PVC
- Webbing strap / handle at one end, 4 stainless steel castors at the other end
- Heavy duty Velcro fastening along the length
- Colours: blue, grey, green, beige, brown
