

Vektor: a new era in automated pool safety -----

Vektor is a new automated rollup system designed to aid the use of our PowerPlastics Solid Safety Cover— the perfect accessory for those with a safety cover and small children. Although the PowerPlastics Solid Safety Cover is fully workable on its own, the Vektor assists users of this cover, especially those operating the cover single-handedly.

Why Vektor? -----

Convenience: we live in a world where convenience is key, and everyone is looking for affordable products to streamline their lives, especially parents with small children. But fully automatic covers are often too expensive for the average home. Vektor bridges the gap, favoured for its affordability and the added convenience of a semi automatic cover.

Safety: one of the most dangerous mistakes parents make is to purchase a safety cover but not actually use it. This, by and large, is due to the hassle factor and laziness around re-covering a pool after use. While the PowerPlastics Solid Safety Cover is already easy to use (without fiddly hooks and eyelets), adding the Vektor makes it truly effortless.

Vektor is suited to solid pool covers measuring up to 12m x 5.5m.

OPENING THE POOL

Simply attach to the aluminium bars of the PowerPlastics Solid Safety Cover, engage the motor via the corded control and the unit propels itself along the pool's paving at the same time as the cover, rolling the cover in.

CLOSING THE POOL

To re-cover / close the pool, the nylon webbing strap is attached to the first batten on the leading edge of the cover. Once the motor is engaged, the cover is rolled out over the pool via a durable nylon strap.

Features -----

- 12V electric motor
- Magnetic corded remote
- Wall mounted bracket for storage
- Ergonomic handle and wide wheels for better traction
- Fully portable
- 1 year Warranty
